PROJECTS

Road Trip Escape: roadtripescape.herokuapp.com

A road trip planner that would allow users to plan cross country trips and stop at national parks on the way. I implemented the use of **Rails, JavaScript, GoogleMaps API** in order to get the project in a working condition.

CrossTrain:

A web application designed to allow users to schedule lectures and mentoring sessions with professionals in desired work space. On this group project I learned how to use **JavaScript** and **jQuery** on a much greater level. I also learned how to work within a group dynamic. I learned how to work within a group and how to delegate tasks and work with a group **Git repo**.

TenderPets: tenderpets.herokuapp.com

A mobile application designed to allow users to search through pets available in shelters in order for the pets to be adopted by the users. On this project we are using **Ruby on Rails** and created our own gem to work with the **PetFinder API**, also the project will consist of mostly **JavaScript** through the use of **Angular.js, Hammer.js**, as well as **HTML5** and **CSS3**.
